

# Trafic routier

**Bilan 2023**

[www.ain.fr](http://www.ain.fr)

**AIN**<sup>01</sup>  
le Département

La réactualisation périodique et régulière des comptages routiers permet de mesurer objectivement les évolutions des trafics qui reflètent les incidences des aménagements de zones d'habitat et économiques.

Le comptage spécifique des poids lourds contribue à identifier les itinéraires de transit et ceux de desserte des zones d'activités économiques. Ils permettent aussi de définir au plus juste les techniques et dimensionnements des travaux des chaussées. Une bonne connaissance du trafic poids lourds se traduit par une optimisation des coûts d'entretien des routes départementales.

La fréquence de renouvellement des comptages est de :

- 5 ans pour un trafic supérieur à 2 500 véhicules par jour,
- 7 ans de 1 000 à 2 500 véhicules par jour,
- 10 ans pour un trafic inférieur à 1 000 véhicules par jour.

En 2023, 39 stations permanentes de comptage sont installées sur le réseau départemental. Parmi ces 39 stations, 28 sont automatisées et comptent en permanence les véhicules motorisés, en distinguant les véhicules légers et les poids lourds. La moitié d'entre elles sont alimentées en énergie par des panneaux solaires. Elles transmettent toutes les heures leurs données de comptage à un serveur central, ce qui contribue à réduire les déplacements des agents sur place et à vérifier à distance leur fonctionnement.

Trois grands axes supportent un trafic moyen journalier annuel de plus de 25 000 véhicules :

- La RD 884 à Thoiry : MJA = 29 992 véhicules, dont 3,3 % de PL (29 106 en 2022),
- la RD 1079 à Viriat : MJA = 26 094 véhicules, dont 6,5 % de PL (26 254 en 2022)
- la RD 1075 à Ambérieu en Bugey : MJA = 25 677 véhicules, dont 5,9 % de PL (24 873 en 2022).

Cette année 2023, le trafic global mesuré sur les routes structurantes et de liaison équipées de stations permanentes est en faible augmentation : + 1.29 % par rapport à 2022. Le trafic des poids lourds a, quant à lui, diminué : -2,08 % en moyenne par rapport à 2022.

Les augmentations de trafic les plus significatives s'observent sur les axes suivants :

- RD 1005 à Ornex : + 10,35 %, dont PL + 4,04 %
- RD 117A à Bourg-en-Bresse (Rocade sud-est) : + 7,47 %, dont PL 6,80 %

L'ensemble des données de trafic est également disponible sous forme cartographique sur la page du site **[www.ain.fr/comptages-routiers](http://www.ain.fr/comptages-routiers)**

# *Statistiques routières départementales 2023*
